

SOMALIA | Fortnight Markets and Supply Chain Update

16 – 30 November 2024

World Food Programme

SAVING LIVES CHANGING LIVES

HIGHLIGHTS

Prices: Over the past two weeks, market prices across Somalia have generally trended towards stability. In Mogadishu and Jubaland, prices remained steady, while slight fluctuations were noted in Hirshabelle, Galmudug, Puntland, Southwest, and Somaliland. In Somaliland, earlier price instability driven by supply shortages and inflationary pressures during the election period has eased, though minor price increases persist. The post-election stability has improved supply chains and boosted market confidence, fostering more favorable market conditions.

Prices of local cereals including white maize and red sorghum, remained largely stable in Mogadishu and Jubaland, with slight changes of 1% – 2% observed in Hirshabelle, Galmudug, Puntland and Somaliland. However, Southwest experienced 6% decrease in prices of white maize, likely due to improved supply conditions, however, red sorghum prices followed a similar trend to the other regions, with a marginal change of 1%.

Imported food prices, including rice, wheat flour, and pasta, have shown stability in Mogadishu, Galmudug, and Jubaland. However, slight changes of 1% were observed in Hirshabelle, Somaliland, Puntland, and Southwest, reflecting steady import levels and balanced supply and demand over the past two weeks

Sugar prices remained steady in most regions, including Mogadishu, Hirshabelle, Galmudug, and Jubaland, with marginal changes of 1% – 2% in Puntland, Somaliland, and Southwest, reflecting minor supply chain adjustments. Vegetable oil prices showed mixed trends: stability in Mogadishu, Southwest, Jubaland, and Hirshabelle; a 4% increase in Galmudug; and a 1% rise in Somaliland, likely due to localized supply constraints. Conversely, Puntland experienced a 4% decrease attributed to improved supply and availability.

Camel milk prices remained stable in Mogadishu and Jubaland, with slight increases of 1% to 2% observed in Galmudug and Somaliland. In contrast, Puntland and Southwest saw declines of 3% to 5%, likely driven by improved local supply. Goat prices remained steady overall, with modest increases of 1% to 2% in Hirshabelle, Galmudug, and Southwest, while Puntland experienced a notable 5% rise due to limited supply.

Diesel prices remained steady in all regions except for a minor increase of 1% in Somaliland. Exchange rates followed the same trend remaining stable across most regions. Notably, Somaliland's currency appreciated by 11%, recovering from earlier depreciation. This recovery is attributed to stabilized conditions following the election period, which enhanced public confidence in the Somaliland shilling.

Availability: Overall, markets were adequately stocked to meet household demands. Nonetheless, specific markets such as Qandala, Xarardheere, Burco, Buur Hakaba, Ceel Barde, Ceel Afweyn, Ceel Dheer, Cerigaabo, Belet Xawo, Hobyo, Iskushuban, Jilib, Caynabo Lughaye, Zeylac, Badhaadhe, Baki, and Elwak, continued to face complete unavailability of vegetables. Additionally, markets such as Xarardheere, Kismayo, Balcad, Badhaadhe, Qorioley, Buur Hakaba, Zeylac, Iskushuban, Luuq, Lughaye Jalalaqsi, Ceeldhere, and Ceel Afweyn, faced unavailability of some commodities such as sorghum, cowpeas, split peas and maize.

Assortment: Most markets remained vibrant, providing a wide range of commodity brands and quantities, demonstrating resilience. However, some parts of Somaliland, Puntland, and Hirshabelle experienced sporadic shortages of vegetables and some commodities such as imported eggs, okra, camel meat, pumpkin, bananas, and spinach, particularly in Cadale, Zeylac, and Qandala.

Quality: Commodities were consistently reported to meet satisfactory quality standards across all states nationwide.

Resilience: Throughout the country, the movement of goods remained consistent or showed minor variations influenced by persistent insecurity.

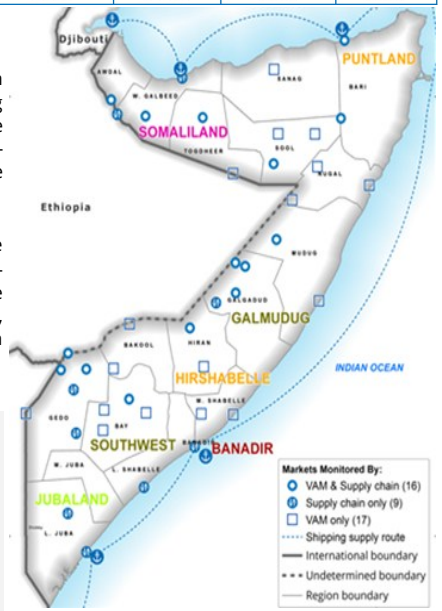

Logistics: Most major roads and corridors in Somalia are typically accessible, although specific routes encounter difficulties due to security concerns. These include routes like Belet-Weyne-Cadaado, Barawe-Jilib, Mogadishu-Marka-Barawe, Baydhaba–Qansax Dheere-Garbahaarey, Baydhaba-Doolow, Baydhaba-Luuq, Kismayo-Baardheere -Baydhaba, Kismayo-Afmadow-Dhobley, Gaalkacyo-Bacadwayne, Baydhaba-Buur Hakaba-Garbahaarey, and Abudwak-Xerale.

BI-WEEKLY MARKET PRICE VARIATIONS

	PRODUCT	MOGADISHU	HIRSHABELLE	GALMUDUG	SOMALILAND	PUNTLAND	SOUTHWEST	JUBALAND

IMPLICATIONS ON FOOD SECURITY

- Food prices remained largely stable, yet they remain elevated in northern states. In Somaliland, the situation is gradually calming following the election results, which has slowed the upward price trend. However, persistently high prices continue to pose challenges for food security, necessitating close monitoring in the coming periods, particularly in Somaliland.
- Market functionality and food quality are adequate across the country. However, localized shortages of items such as vegetables and transportation challenges on insecure routes continue to limit access to diverse foods in certain districts. In Somaliland, the post-election environment is improving, with supply chain dynamics steadily pointing towards greater stability.

HOW WE MONITOR MARKETS

WFP Somalia conducts weekly market and supply chain monitoring assessments and covers 42 locations per week. It also maintains a large pool of monitors through third-party and internal capacity collecting both quantitative and qualitative data. The data on Market Functionality Index (MFI) is being collected on a rolling basis and 9 dimensions of market functionality are being monitored and reported real-time.
