- Market Functionality Index –

APRIL 2025

COUNTRY MARKET ASSESSMENT : MFI IN A NUTSHELL

THE MARKET FUNCTIONALITY INDEX

The Market Functionality Index methodology is WFP's standardized market assessment approach that aims to quantify market functionality in a score per marketplace, while also identifying weaknesses or areas of interventions to guarantee the continuity or effectiveness of the assistance.

SURVEY

The methodology relies on a standard survey where questions are organized under nine dimensions deemed crucial to make a judgement statement around market functionality. These are: Assortment, Availability, Price, Resilience of Supply Chains, Competition, Infrastructure, Service, Food quality and Access and Protection.

SCORING

Markets are thus globally scored on a scale from 0 to 10 to allow worldwide comparability, where full market functionality (MFI=10) refers to a fully developed, efficient and functional market. In most contexts where WFP operates, we do not expect such scores to be achieved.

WEIGHT

The MFI considers three basic categories:

1) Cereals
2) Food items other than cereals
3) NFIs.

Cereal foods are considered more valuable by WFP to beneficiaries and thus weighted higher than non-cereal foods and NFIs. This means scores will be impacted more by the measurements (assortment, availability, etc.) of cereals than non-cereal food and NFIs.

DATA COLLECTION

Data collected 23rd to 26th April 2025

232 traders interviewed 12 assessed marketplaces

REPORT FORMAT

Report findings have been divided into 9 key dimensions of a functioning market:

1. **Assortment**
2. **Availability**
3. **Prices**
4. **Supply Chain Resilience**
5. **Competition**
6. **Infrastructure**
7. **Service**
8. **Food Quality**
9. **Access and Protection**

MFI 2025 : EXECUTIVE SUMMARY

- 12 Markets Assessed in 3 regions (North East, Northern and Upper West)
- Data collection period: April 23rd –26th , 2025

KEY FINDINGS

- For the 3 regions that were assessed in this round, the the overall MFI score was **5.7** indicates a **partially functional market**
- The **main drivers** that brought the **overall score down** were the **weak market infrastructure (4.8), service (5.0) and price volatility (5.4)**. The dimensions that had the **highest average scores** were **Access and Protection (10)**, **Competition (9.3)** and **Assortment (9.0)**.
- The availability of cereals and other essential goods was generally stable across most assessed markets, except in Sang and Nyoli, both of which recorded an MFI availability score of five (5), indicating an imminent risk of stock-outs and commodity scarcity.
- In terms of risk levels for CBT operations, **one (1) market (Karaga) was considered to be very high risk (8.3 percent), three (3) out of the remaining 11 (27.7 percent)** assessed markets were considered to be of "**high risk**", five (5) markets (45.5 percent) were considered to be "**medium risk**", whilst two (2) markets (18.2 percent) were considered to be "**low risk**."

RECOMMENDATIONS

- Given the high risk of most markets for CBT operations, various mitigation measures and market development activities will need to be considered if implementing CBT operations, with one of the main ones being **close price monitoring across nearly all markets** as traders reported price increases and volatility.
- For markets which scored low on the **Infrastructure and availability** dimensions, possible mitigation measures include vendors procuring from traders operating in premises with adequate standards, supporting smaller retailers to obtain licenses to ensure food quality is up to standards and rehabilitating market infrastructure in the longer term.
- In areas where service delivery is a challenge, CBT operations, particularly those targeting retailers, should integrate retailer capacity strengthening as a core component of Market Development Activities (MDA) to enhance service quality and operational readiness.

NOTES

- *For Sagnarigu district, the Tamale Aboaboo market was surveyed instead of markets in Sagnarigu because households and retailers in Sagnarigu district largely purchase food items from Tamale Aboaboo market.*
- *For Mamprugu Moagduri, Fumbisi market in Upper East was surveyed instead of markets in Mamprugu Moagduri market in North East because households and retailers in Mamprugu*

COUNTRY MARKET ASSESSMENT : OVERVIEW

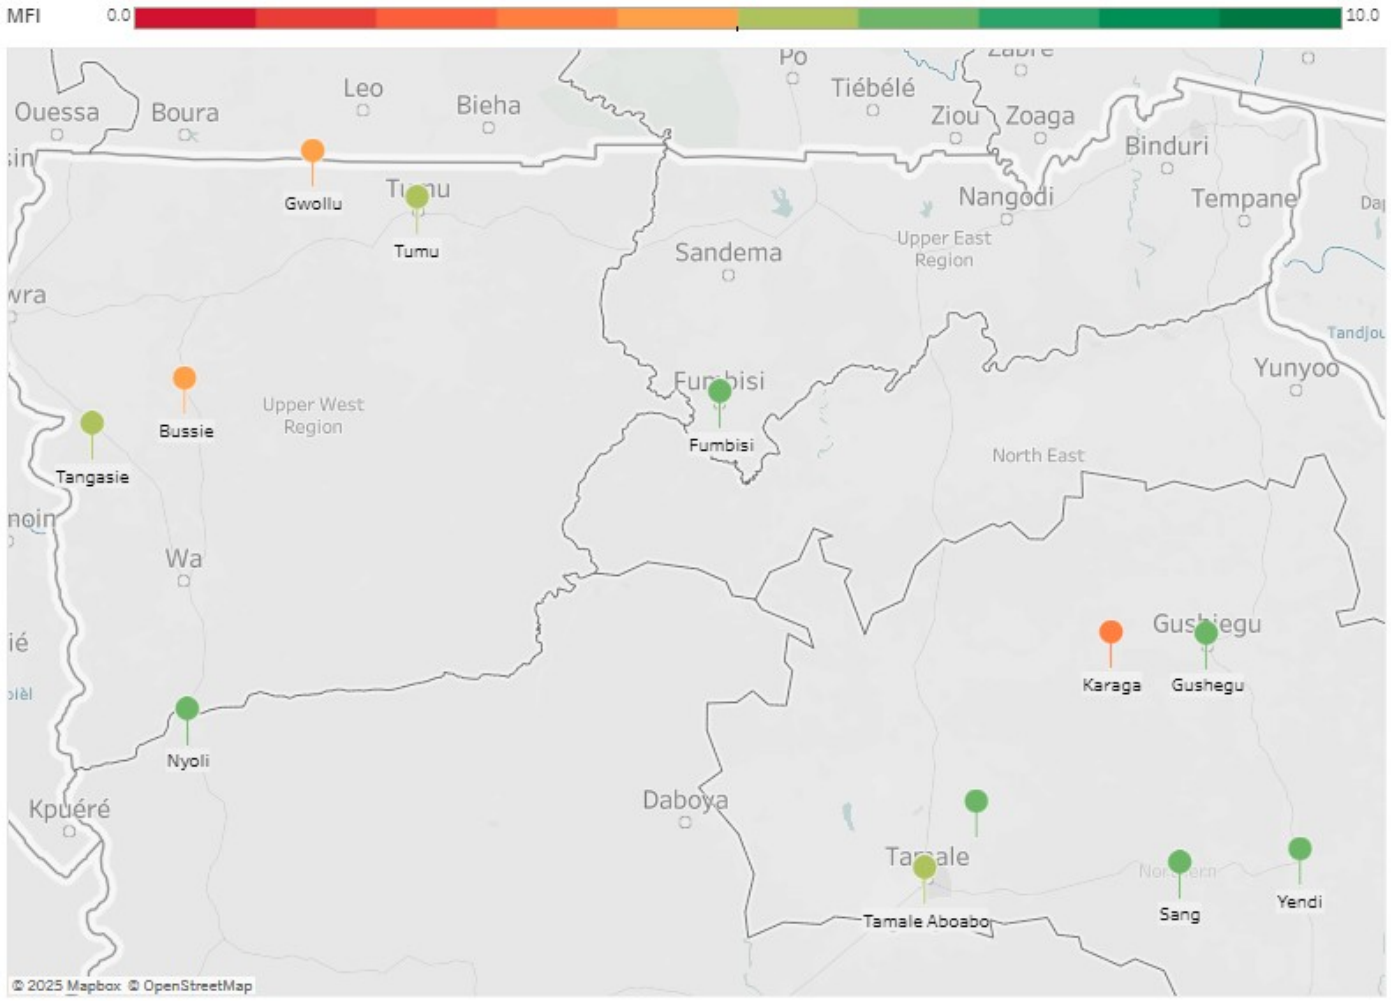

OVERVIEW

At the national level (i.e. for the 3 regions that were assessed in this round), the overall MFI score was **5.7** indicates a **partially functional market**. The markets are operational, however, price volatility, weak market infrastructure and low service quality limits the full functionality of the markets. At the market level, all markets fall within the range of low partial functioning market through to moderately well functioning markets except Karaga market which indicates a poorly functional market. This is followed by Gwollu and Busie markets which both indicates low partial functional markets. Among all the 12 markets, Yendi market has the highest score which indicates a moderately well functional market.

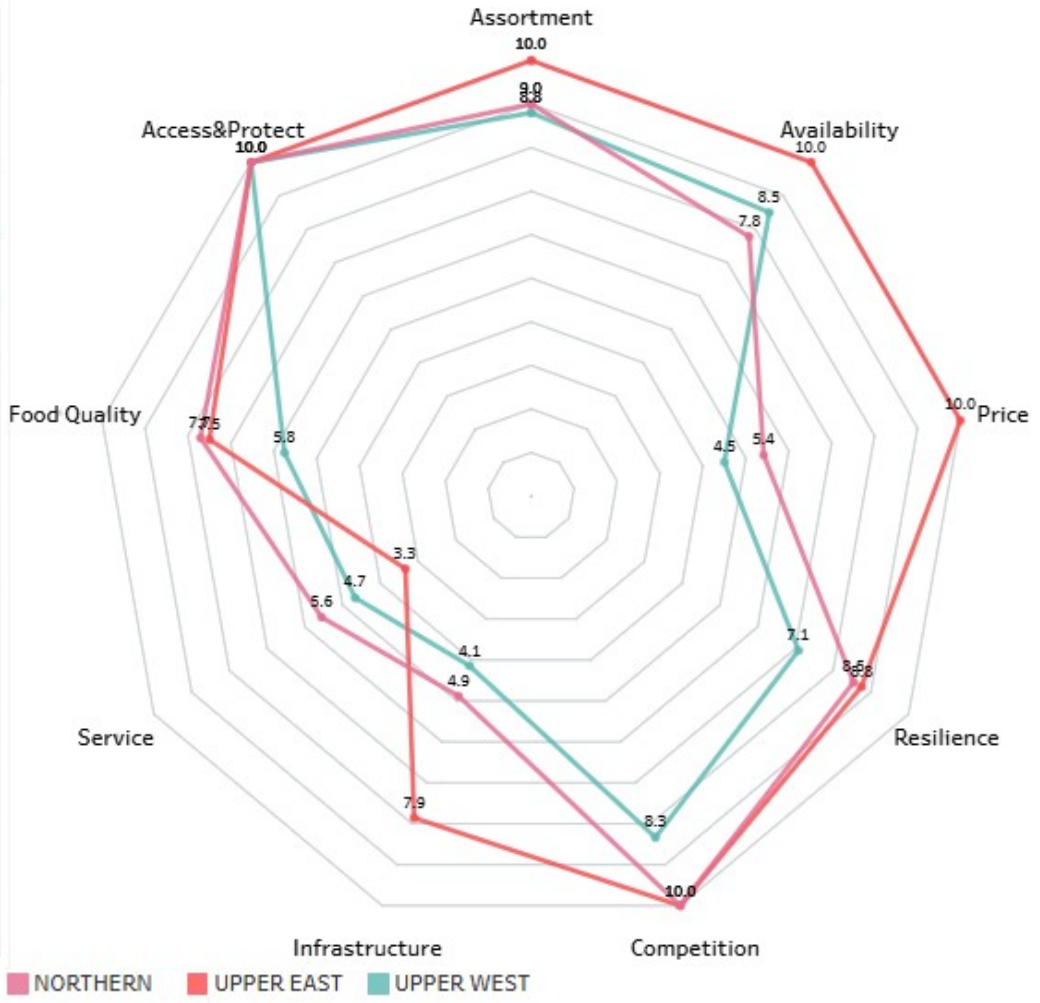

**Markets in the Western Africa region tend to score relatively low on the service dimension due to low maturity.*

COUNTRY MARKET ASSESSMENT : OVERVIEW

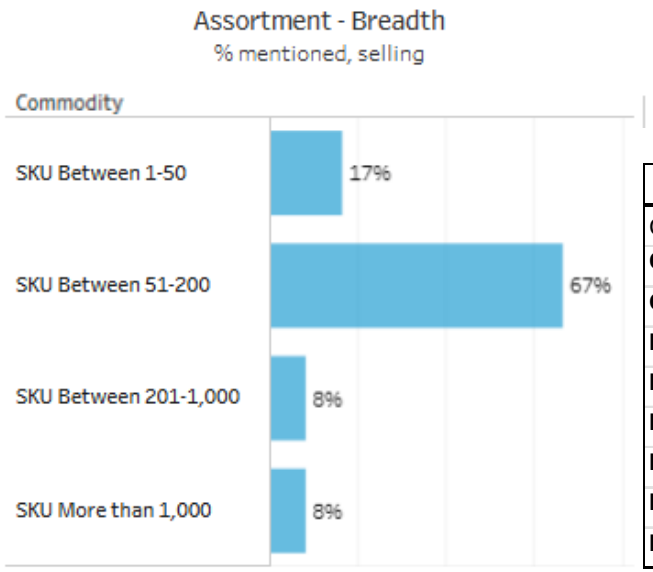

Regional Results by Dimension

FINDINGS BY MFI DIMENSION : ASSORTMENT

Assortment ranks as the third highest among the nine market dimensions, with individual market scores ranging from 8 to 10. The assessed markets show a relatively good diversity of basic food items, including cereals and non-cereal foods, as well as non-food items (NFIs) such as communication, education, household goods, health, shelter, and WASH-related products.

Overall, market diversity is moderate, with 67% of traders reporting Stock Keeping Unit (SKU) counts between 51 and 200, indicating a reasonable level of product variety for consumers

Assortment - Depth
% mentioned, selling

	NR						UE	UW				
Commodity	Gushegu	Karaga	Nanton	Sang	male Aboal	Yendi	Fumbisi	Bussie	Gwollu	Nyoli	Tangasie	Tumu
Cereal Food	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%
Other Food	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%

Note:

The first bar chart (on the left) displays the % of traders by breadth of assortment The second chart displays the average percentage of traders mentioning they sell the different product categories. If a trader mentions he/she sells Cereals or, Other Foods he/she is asked to specisy which items, See in the graph below the average percentages of traders mentioning they sell the specified items.

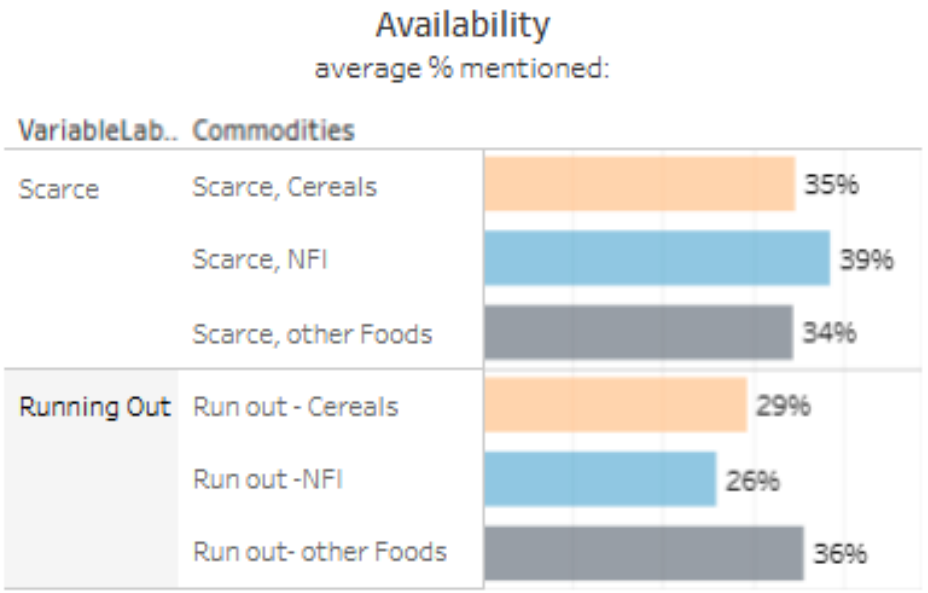

FINDINGS BY MFI DIMENSION : AVAILABILITY

Availability of essential goods was generally not a concern in most of the assessed markets. Seven out of twelve markets scored the maximum availability rating of 10, while the remainder scored between 9 and 7.5. However, Sang and Nyoli markets recorded significantly lower scores due to limited availability of maize, rice, sugar/sweets, and oils/fats.

In Sang, traders also reported running out of milk and other dairy products. On average, 34 percent to 39 percent of traders reported scarcity of cereals, NFIs, and other food items. Additionally, 26 percent to 36 percent of traders across all markets indicated stock-outs of cereals, NFIs, and other key food products such as legumes/nuts, dairy, and meat/fish.

At the regional level, 59 percent of traders in Upper West markets reported scarcity of NFIs, the highest across the three assessed regions. This was followed by the Northern Region, where 40 percent of traders reported running out of other food items. In contrast, Fumbisi market in the Upper East Region recorded the lowest incidence of scarcity, with no traders reporting shortages of NFIs or cereals.

RESULTS FOR ALL MARKETS

Availability - regionally
average % mentioned:

Commodities	NORTHERN	UPPER EAST	UPPER WEST
Scarce, Cereals	38%	17%	34%
Scarce, NFI	59%	0%	22%
Scarce, other Foods	36%	33%	33%
Run out - Cereals	26%	0%	39%
Run out -NFI	35%	17%	17%
Run out- other Foods	40%	33%	31%

FINDINGS BY MFI DIMENSION : PRICE

Aside Service dimension, Price was the dimension which had the lowest average national score. Karaga market had the lowest score (0.8), followed by Bussie (2.5) and Tamale Aboaboo market (2.5). On the contrary, Fumbisi and Sang markets had the highest score of 10.

Overall,

- 32 percent of assessed markets have experienced price increase in cereals
- 50 percent of assessed markets have experienced price increase in other foods
- 43 percent of assessed markets have experienced price increase in NFIs

- 73 percent of assessed markets reported that cereal prices are unstable
- 72 percent of assessed markets reported that other food prices are unstable
- 70 percent of assessed markets reported that NFI prices are unstable

Price scores for Karaga, Bussie and Tamale Aboaboo market, indicating major issues of price affordability, stability and predictability across all commodity types.

For all markets with low scores on this dimension, close price/market monitoring will be key if CBT operations are to be considered. Other possible risk mitigation measures include frequent review of MEB value and increasing the frequency of distribution to adjust the value based on market price fluctuations.

RESULTS FOR ALL MARKETS

FINDINGS BY MFI DIMENSION : SUPPLY CHAIN RESILIENCE

Supply chains of assessed markets are fairly resilient, with the national average score being 8.0

In terms of vulnerability to disruptions, all markets scored well in terms of node complexity indicating that traders have more than 1 supplier or their different commodities. All markets (except 1 – Tumu) also scored well in terms of node criticality, indicating that traders in general do not rely on a single supplier for their commodities. Issues with node density were what brought the scores down for several markets, with traders reporting that most of their suppliers are geographically located in the same place, rendering them more vulnerable to (natural) disaster-related disruptions.

Resilience of Supply Chains

Node Density: refers to the geographical spacing of nodes within a supply chain network; Node Complexity: refers to having more than one supplier; Node criticality: refers to the presence of a single supplier upon which most traders rely upon.

Explore in the table below what the median trader reports.

		Node Complexity			Node Criticality			Node Density			Responsiv..	Responsiv..
Adm1Name	MarketName	Cereals	Other Food	NFI	Cereals	Other Food	NFI	Cereals	Other Food	NFI	Current stock	Lead time
NORTHERN	Gushegu	Yes	Yes	Yes	Yes	Yes	Yes	No	Yes	Yes	Yes	Yes
	Karaga	Yes	Yes	Yes	Yes	Yes	Yes	No	Yes	Yes	Yes	Yes
	Nanton	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
	Sang	Yes	Yes	Yes	Yes	Yes	Yes	No	No	Yes	Yes	Yes
	Tamale Aboabo	Yes	Yes	Yes	Yes	Yes	Yes	No	Yes	No	Yes	Yes
	Yendi	Yes	Yes	Yes	Yes	Yes	Yes	No	No	No	Yes	Yes
UPPER EAST	Fumbisi	Yes	Yes	Yes	Yes	Yes	Yes	No	Yes	Yes	Yes	Yes
UPPER WEST	Bussie	Yes	Yes	Yes	Yes	Yes	Yes	No	No	No	No	Yes
	Gwollu	Yes	Yes	Yes	Yes	Yes	Yes	No	No	No	Yes	Yes
	Nyoli	Yes	Yes	Yes	Yes	Yes	Yes	No	No	No	Yes	Yes
	Tangasie	Yes	Yes	Yes	Yes	Yes	Yes	No	No	No	Yes	Yes
	Tumu	Yes	Yes	Yes	Yes	No	Yes	No	No	No	Yes	Yes

Note:

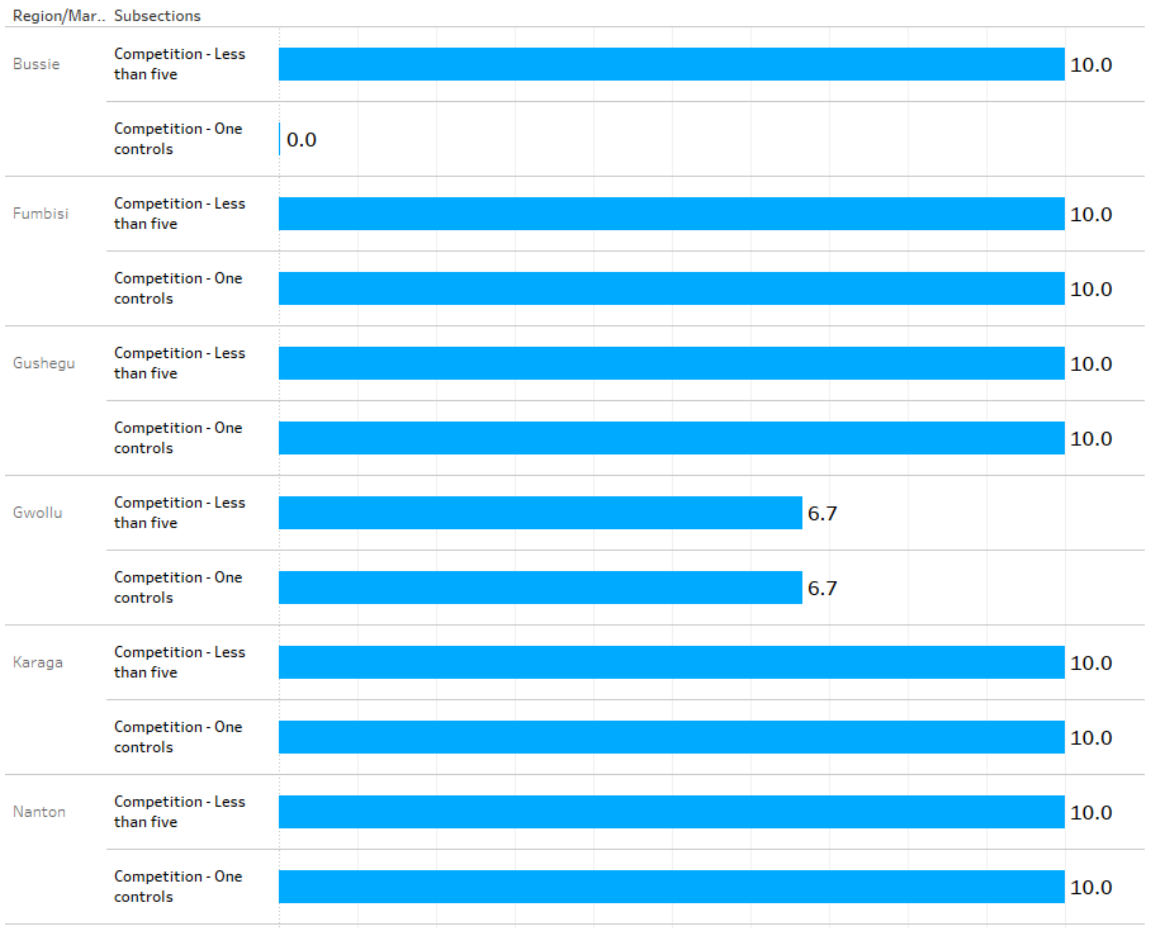

The question verbatim for **Node Complexity** reads: *"D2.2 Do you currently have more than 1 supplier for: [Cereal food, other food, and non-food items]?"*

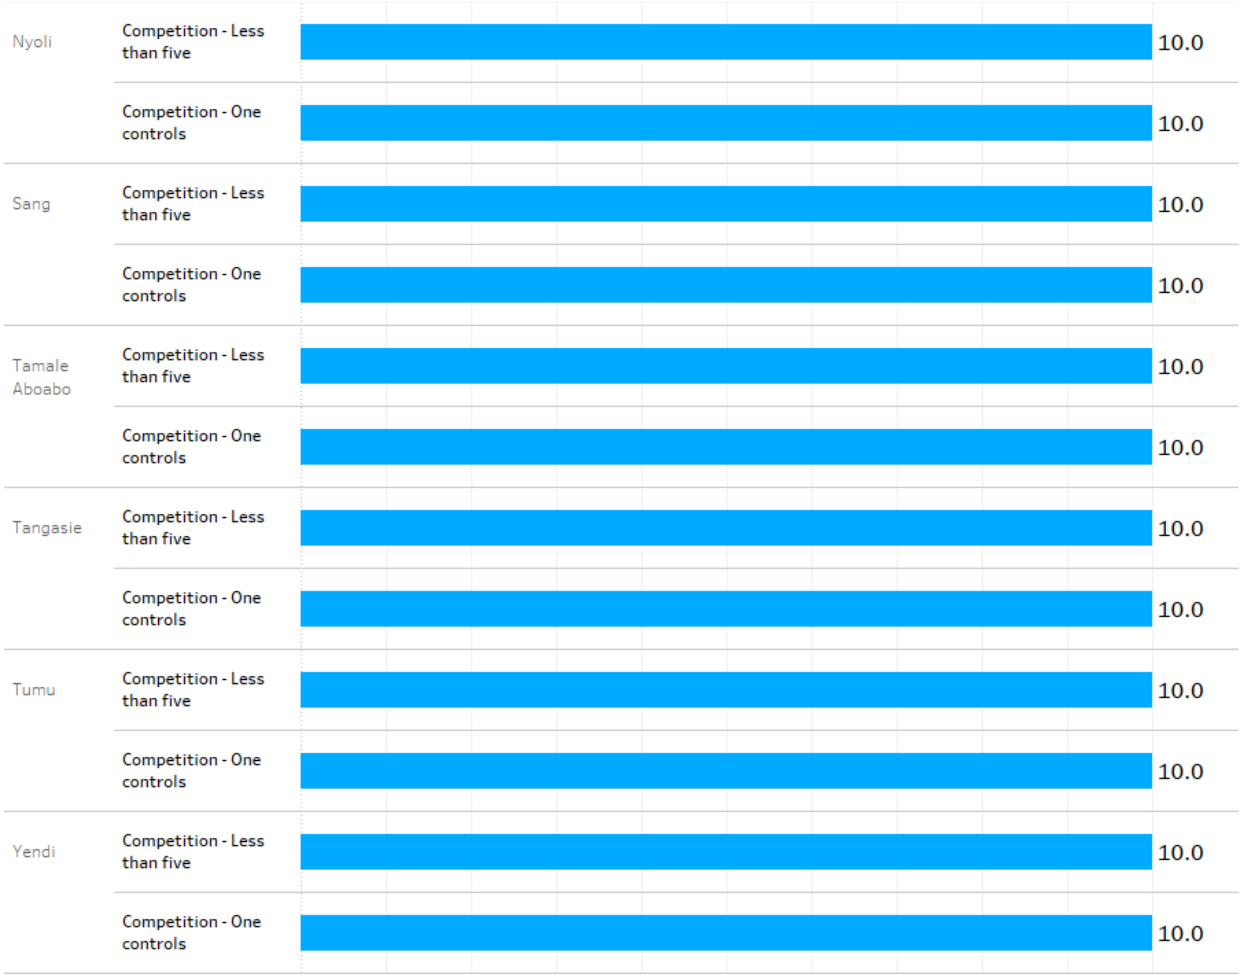

The question verbatim for **Node Criticality** reads: *"D2.3 Does your business mostly rely upon a single supplier for: [Cereal food, other food, and non-food items]?"*

The question verbatim for **Node Density** reads: *"D2.1 Are most of your suppliers geographically located in the same place for: [Cereal food, other food, and non-food items]?"*

In the table above, "Yes" refers to a median of 1 indicating resilience and "No" refers to a median of 0 indicating lower resilience.

FINDINGS BY MFI DIMENSION : COMPETITION

Competition was the dimension which had the 2nd highest national average score of 9.3. With the exception of 2 markets (Bussie and Gwollu markets in Upper West), all markets scored a 10 on this dimension. This indicates that these markets are not too concentrated or reliant on a single supplier (i.e. low risk of threat to market functionality).

Bussie market scored a 5 and Gwollu market 6.7 on this dimension. The score of Bussie market indicates presence of monopoly. Gwollu market's score indicates issues of having less than 5 traders for each of the commodity groups as well as the presence of a monopoly for each of the commodity groups. If CBT is to be considered in this market, possible mitigation measures include vouchers with price controls and trying to introduce new traders to the area if possible.

FINDINGS BY MFI DIMENSION : INFRASTRUCTURE

As is common in markets in West Africa, the assessed markets scored relatively low on the infrastructure dimension, with a country overall score of 4.8. Gwollu (2.1) had the lowest score, followed by Karaga market (3.6) and Tumu market (3.6). In terms of shop conditions, 8 out of 12 markets reported "medium" category.

In terms of market infrastructure features, nearly all assessed markets have reliable communication network and walkways and emergency exits. The top 3 limitations were lack of 1) a closed sewage system, 2) toilets (available in 8 out of 12 markets), 3), waste collection (available in 8 out of 12 markets), water availability (manual pump or tap in close proximity of each vendor, i.e. max 5 min walking) only available in only available in 7 assessed markets out of 12

		Conditions			Features						
Adm1Name	MarketName	Good	Medium	Poor	Closed sewage sys..	Network	Shelter	Toilet	Walkaways	Waste Collection ..	Water
NORTHERN	Gushegu	No	Yes	No	No	Yes	Yes	Yes	Yes	No	No
	Karaga	No	No	Yes	No	Yes	Yes	Yes	Yes	No	No
	Nanton	No	No	Yes	No	Yes	Yes	Yes	Yes	Yes	Yes
	Sang	No	Yes	No	No	Yes	Yes	No	Yes	Yes	No
	Tamale Aboabo	No	No	Yes	No	Yes	Yes	Yes	Yes	Yes	Yes
	Yendi	No	Yes	No	No	Yes	Yes	Yes	Yes	Yes	No
UPPER EAST	Fumbisi	Yes	Yes	No	No	Yes	No	Yes	Yes	Yes	Yes
UPPER WEST	Bussie	No	Yes	No	No	No	Yes	Yes	Yes	Yes	No
	Gwollu	No	No	Yes	No	Yes	No	No	Yes	No	Yes
	Nyoli	No	Yes	No	No	Yes	Yes	Yes	Yes	Yes	Yes
	Tangasie	No	Yes	No	No	Yes	Yes	No	Yes	Yes	Yes
	Tumu	No	Yes	Yes	No	Yes	Yes	No	Yes	No	Yes

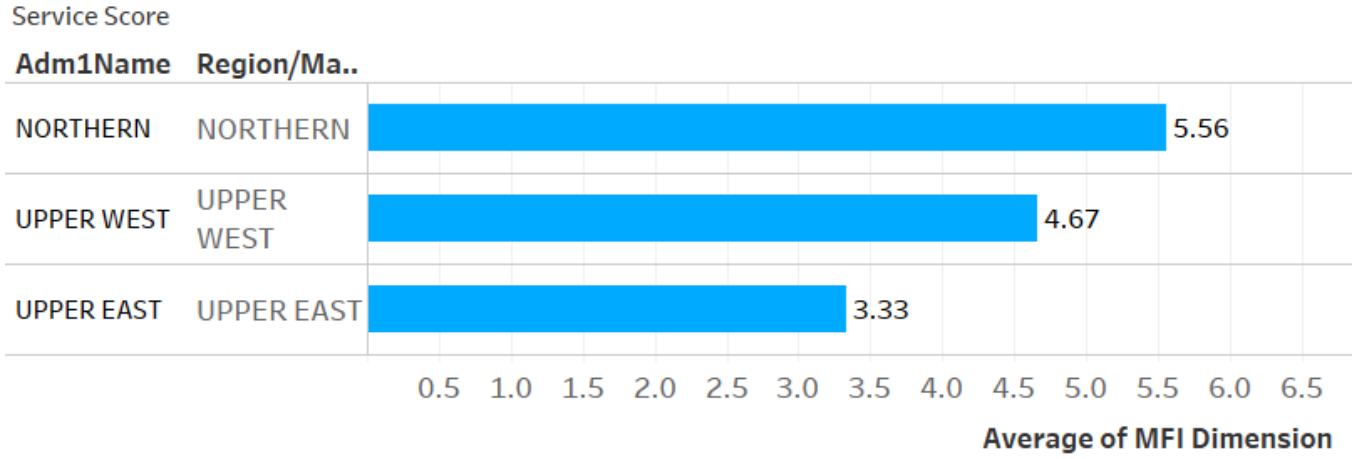

Note:

Conditions: *The combination of "Yes", "No" attempts to give a description of the state of traders. As an example, the combination "Yes" ,"No", "No" (Order matters!) can be interpreted as the best one as it depicts a market where all stores are in an excellent condition.*

Features*: The table displays a "Yes" if the considered features are present in a market, a "No" otherwise.*

FINDINGS BY MFI DIMENSION : SERVICE

As is common in markets in West Africa, the assessed markets scored relatively low on the service dimension.

- All assessed markets majority of traders reported 1) itemized receipts are not automatically issued and 2) not possible to purchase from the shop remotely (e.g. online shopping). Aside Aboabuu market where half of the traders indicated it is possible to sell to remote buyers, the remaining few traders with remote selling capabilities are dotted around 7 markets which includes Fumbisi market, Gushegu market, Karaga market, Mion market, Nanton market, Tumu market and Yendi market.

- Generally in all markets assessed, price tags are not visibly displayed (printed or handwritten).

- Aside Fumbisi market (Upper East) 11 out of 12 of the markets assessed reported that on average, the waiting time at checkout is normally shorter than 10 minutes.

- Majority of traders in Yendi market, Tamale abuobuu market, Nanton and Gushiegu markets assessed (4 out of 12 markets) reported on average, shops accept more than one form of payment. This and the other point above has contributed to high service/checkout sores in Northern and Upper West.

Tangasie market in Upper West region and Fumbisi market (Upper East) in had the lowest service score of 3.3. Tamale abuobuu and Sang markets both in the Northern region both recorded a high service score 6.7.

FINDINGS BY MFI DIMENSION : FOOD QUALITY

The overall country score for the food quality dimension is 6.9, with Northern region having the highest average score of 7.7 and Upper West region having the lowest average score of 5.8

In general, as shown on the table, the top 5 issues were

1) food not separated/well protected from contaminants (9 out of 12 markets)
2) Food has visible signs of spoilage (5 out of 12 markets)
3) Fresh food not separated from animal origin (4 out of 12 markets)
4) Meats/poultry food not always refrigerated (6 out of 12 markets)
5) Refrigeration not always working (6 out of 12 markets)

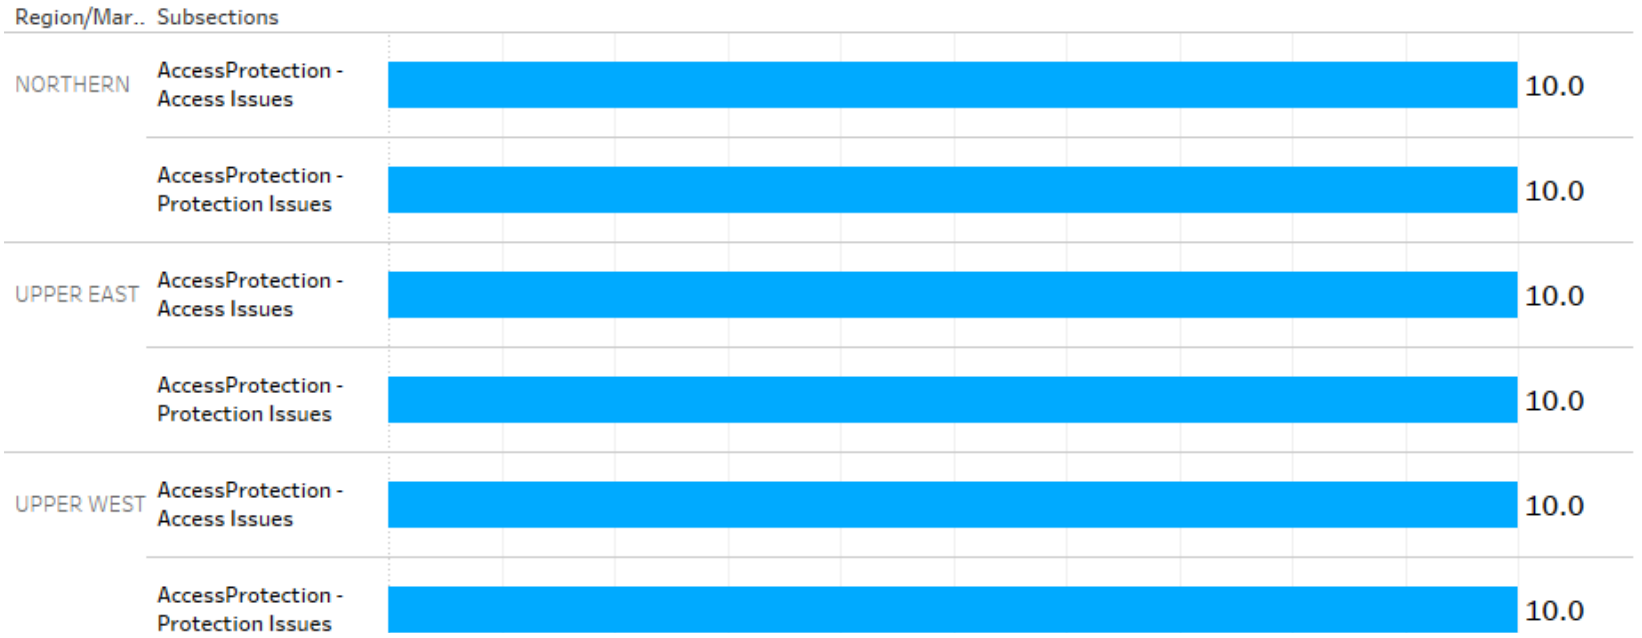

This exposes consumers to a health risk. Markets such as Karaga, Bussie, Gwollu and Tangasie which only have 38-50 percent of the essential food quality features may need mitigation measures such as mobilizing local authorities to build retailer capacity and improve compliance with local food safety regulations, contract traders operating in premises with adequate food safety standards and offering food safety/quality certification to targeted retailers.

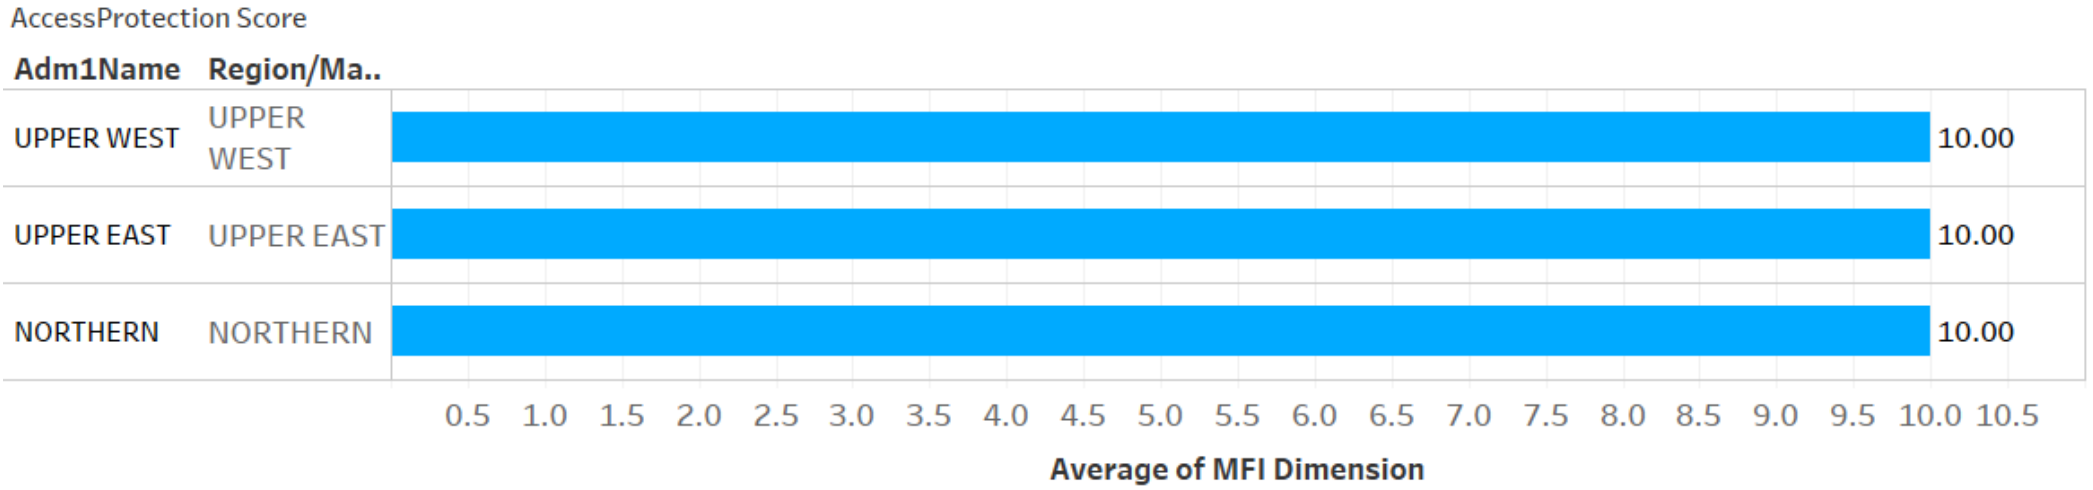

Adm1Name	MarketName	All goods are labelled and ..	Food has no visible sign ..	Food separated fr..	Fresh separated fr..	Meats/ Poultry Foo..	Plastic packaged fo..	Prepackaged intact&label..	Refrigeraion always work..	% Essential Food Quality Features
NORTHERN	Gushegu	Yes	Yes	Yes	Yes	No	Yes	Yes	No	75%
	Karaga	Yes	No	No	No	No	Yes	Yes	No	38%
	Nanton	Yes	Yes	No	Yes	Yes	Yes	Yes	Yes	88%
	Sang	Yes	Yes	No	Yes	Yes	Yes	Yes	Yes	88%
	Tamale Aboabo	Yes	Yes	Yes	No	Yes	Yes	Yes	Yes	88%
	Yendi	Yes	Yes	Yes	No	Yes	Yes	Yes	Yes	88%
UPPER EAST	Fumbisi	Yes	No	No	Yes	Yes	Yes	Yes	Yes	75%
UPPER WEST	Bussie	Yes	No	No	Yes	No	Yes	Yes	No	50%
	Gwollu	Yes	No	No	Yes	No	Yes	Yes	No	50%
	Nyoli	Yes	Yes	No	Yes	Yes	Yes	Yes	Yes	88%
	Tangasie	Yes	No	No	No	No	Yes	Yes	No	38%
	Tumu	Yes	Yes	No	Yes	No	Yes	Yes	No	63%

Note: The table above displays a "Yes" if the analysed feature of Food quality is predominantly present in a market, a "No" otherwise. Considering the results, find the % Essential Food quality Features to summarize the information.

FINDINGS BY MFI DIMENSION : ACCESS & PROTECTION

This dimension had the highest overall country score of 10. All markets scored a full 10 for both access and protection, with the exception. This indicates that, all markets are accessible to all consumers, with no protection issues.

FINDINGS BY MFI DIMENSION : CONCLUSION

CONCLUSION

The April 2025 Market Functionality Index (MFI) assessment across Ghana's Northern, North East, and Upper West regions indicates that most local markets remain partially functional, with an overall average score of 5.7. While assortment (9.0), access and protection (10.0), and competition (9.3) ranked highest among the nine dimensions, indicating good diversity of goods, inclusive access, and sufficient supplier spread, several underlying challenges persist. Food quality was generally acceptable, particularly in the Northern Region (7.7), though weaker in Upper West (5.8). Supply chains also showed moderate resilience, with most traders relying on multiple suppliers, though geographic clustering continues to expose markets to localized disruptions.

Price, infrastructure, and service were consistently the weakest dimensions across all 12 assessed markets. Widespread reports of price volatility, with 73 percent of markets citing unstable cereal prices, and over 70 percent for both other foods and NFIs, highlight the unpredictability and fragility of consumer access. Infrastructure constraints, including poor sanitation, water access, and storage conditions, further undermined market efficiency. These service and infrastructure gaps reflect broader structural issues commonly observed in West African rural markets.

The price instability observed is driven by a combination of persistent inflation, the July–August 2024 dry spell that reduced food supply, and exchange rate fluctuations. While the Ghana cedi depreciated by over 160% between January 2022 and November 2024, from GHS 6.01/USD to GHS 15.98/USD, recent months have seen a notable reversal. In the first quarter of 2025, the cedi appreciated by over 14 percent, buoyed by stronger export receipts, IMF support, and Bank of Ghana interventions. By April 2025, the interbank exchange rate stood at approximately GHS 14.15/USD, a moderate improvement that has somewhat eased imported inflation (Bank of Ghana, 2025; GhanaWeb, 2025; IMF, 2025).

Despite these gains, inflation remains a significant concern. In April 2025, year-on-year food inflation stood at 25.0%, only marginally lower than the November 2024 figure of 25.9%—still among the highest levels recorded in the past two decades (GSS, 2025a; GSS, 2024). Combined with ongoing supply challenges and market infrastructure deficits, these macroeconomic pressures continue to constrain market functionality and affordability for vulnerable households, especially in the north. Continued close monitoring, infrastructure investments, and context-sensitive CBT risk mitigation will be essential to support market recovery and resilience.
