

AFGHANISTAN

Weekly Market Report

Issue 298: Week 1 – June 2026

World Food Programme

Key Highlights

Exchange Rate and Trade Dynamics:

- During the first week of June, the Afghani exchange rate remained stable at AFN 63.8/USD, showing no change from the previous week. The Afghani continues to remain stronger than both last year (+9%) and the three-year average (+16%), helping to moderate imported inflationary pressures.
- Domestic markets continued to operate normally with generally adequate commodity availability, supported by ongoing domestic harvests, seasonal market arrivals, and sustained trade flows through regional corridors. However, transportation costs, regional trade uncertainties, and high dependence on imports continue to expose domestic supply chains to external market and geopolitical risks.

Food Items:

- Overall, national average food prices showed a generally stable trend during the first week of June, with slight week-on-week declines across major staple food items.
- Compared to last year, most food commodities continue to remain above their respective levels, particularly wheat grain (+12%), wheat flour (high-price +7%; low-price +10%), rice (high-quality +31%; low-quality +34%), cooking oil (+3%), sugar (+24%), and salt (+10%). Conversely, pulses (-12%) and bread (-4%) remained below last year's levels.

Vegetables:

- Vegetable prices continued to ease during the first week of June, largely driven by improved seasonal availability and increased domestic supply.
- Tomato prices recorded a significant weekly decline (-12.3%), continuing the downward trend observed in recent weeks. Onion and potato prices show negligible changes from last week, reflecting stable market conditions.
- Compared to last year, potato prices remain substantially above last year's levels (+44%), while tomato prices remain moderately higher (+6%). In contrast, onion prices continue to remain significantly below last year (-24%).

Non-Food Items:

- Diesel prices remained broadly stable during the week (+0.4%) and remains modestly above last year (+4%).
- Fertilizer prices (DAP and Urea) showed negligible week-on-week increases, while they remain significantly higher than last year, particularly DAP (+16%) and urea (+46%), continuing to exert pressure on agricultural production costs. Meanwhile, improved seed (-0.3%) and animal feed (-1.0%) recorded slight declines and remained relatively stable overall.

Livestock and Labour Market:

- The price of a one-year-old live female sheep declined by 6.8% during the week following elevated demand in the lead-up to Eid-ul-Adha. Despite the weekly decline, sheep prices remain broadly in line with last year and slightly above the three-year average.
- Labour market conditions remained weak. While the casual labour wage remained stable at AFN 304/day, labour availability declined to 1.9 days per week. Labour availability remains substantially below both last year (-20%) and the three-year average (-20%), highlighting continued challenges in income-earning opportunities for vulnerable households who are dependent on daily wage labour.

Price Changes and Trend Analysis

Items	Price This Week (AFN)	Price Changes (%)				
		Last Week (%)	Last Year (%)	3-Years Avg. %	Pre-Govt. Transition (%)	Change Since Oct 2025 (%)
Exchange Rate & Food Commodities						
Exchange Rate (AFN/USD)	63.8	0.0%	-9%	-16%	-19%	-4%

	Low:	**6,000** AFN

WFP In-Kind Food Basket Prices in AFN and USD

Casual Labour Terms of Trade (ToT) : Nominal and Real

Cash Food Basket: Trigger Analysis for Transfer Value (TV) Revision

Last TV Revision: October 2025 - 5,800 AFN

Current Basket Price (June 2026, 1st Week)	Consecutive Weeks ≥ 10% to <20% of TV (+/-)	Consecutive Weeks ≥ 20% of TV (+/-)	Percentage Change in TV
5,981 AFN	**0**	**0**	**+3.1**

Triggers are for Transfer Value (TV) revision: *Triggers are thresholds for the number of consecutive weeks that the national average price of the FSAC food basket in AFN has increased or decreased in comparison to the most recent TV by a minimum proportion: four consecutive weeks for a price change of ≥ 20% and eight consecutive weeks for ≥ 10%.*

Food Basket (In-Kind and CBT):

- The in-kind food basket shows a declining trend from its peak in March, supported by stable imports and increased availability of food items.
- Provincial price disparities persisted across markets, driven by variations in transportation costs, local supply availability, and seasonal market dynamics.
- The cash transfer value remains below the trigger threshold for revision and is currently 3.1% higher than the last revision in October 2025.

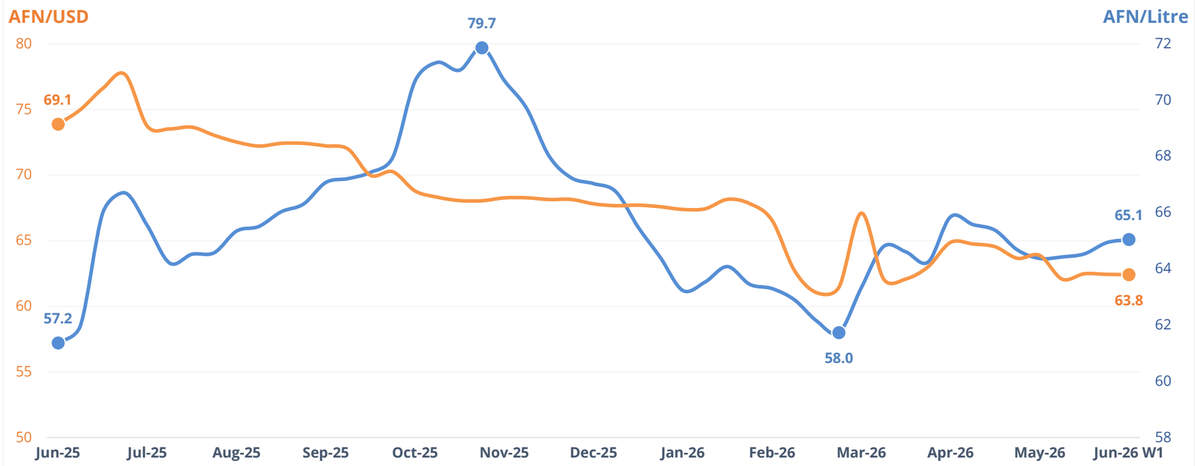

Terms of Trade (ToT):

- The nominal ToT marginally increased during the week to 10.6 kg wheat flour (low price), supported by stable casual labour wages and a decline in wheat flour prices.
- Real ToT declined week-on-week, reflecting a marginal decline in labour availability.
- The real ToT remains below last year (-29%) and the three-year average (-26%), reflecting limited labour availability and rising food prices.

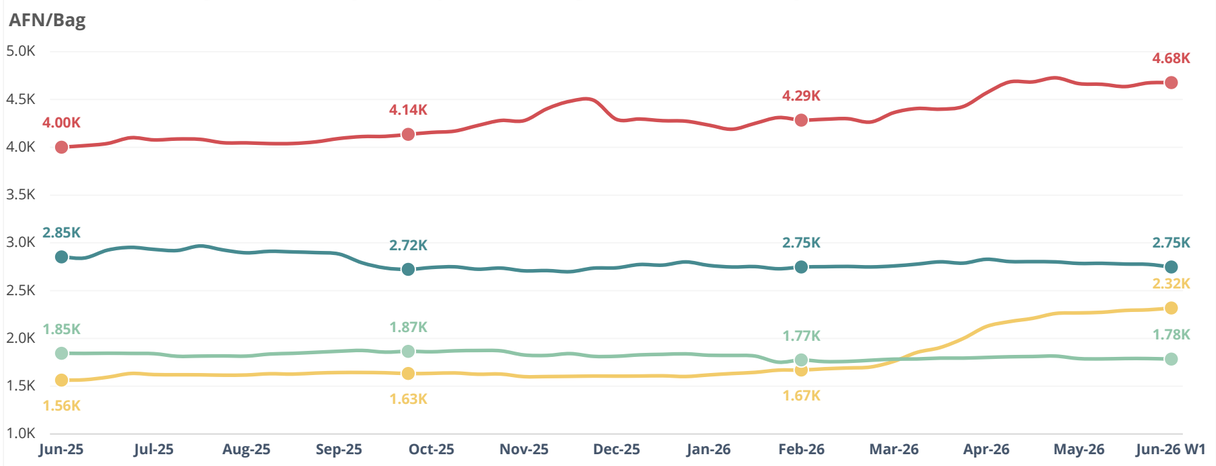

National Average Price Trends – Key Commodities

June 2025 – June 2026 (Weekly)

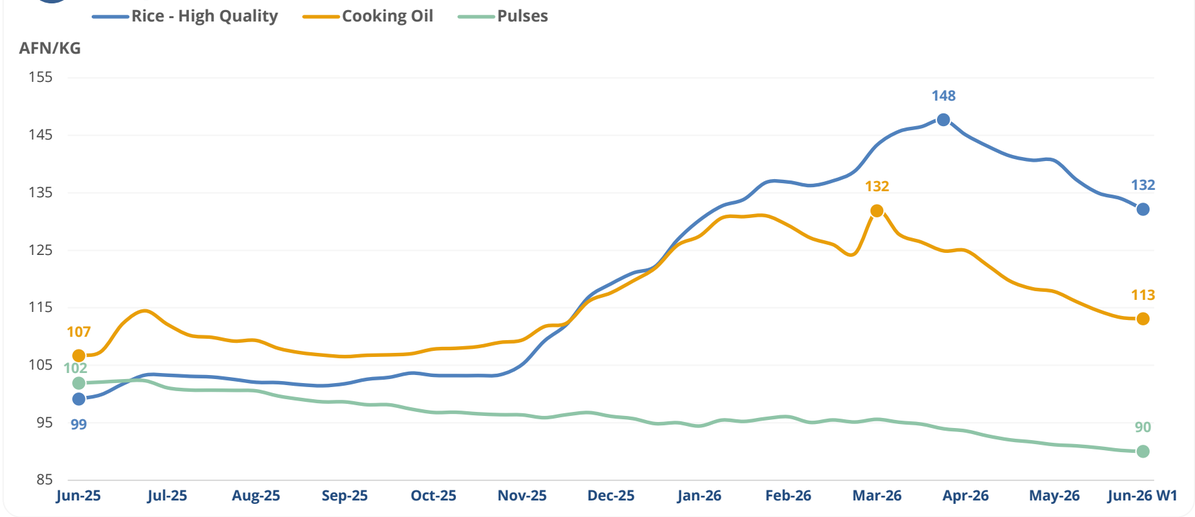

1 Exchange Rate (AFN/USD) and Diesel Price (AFN/Litre)

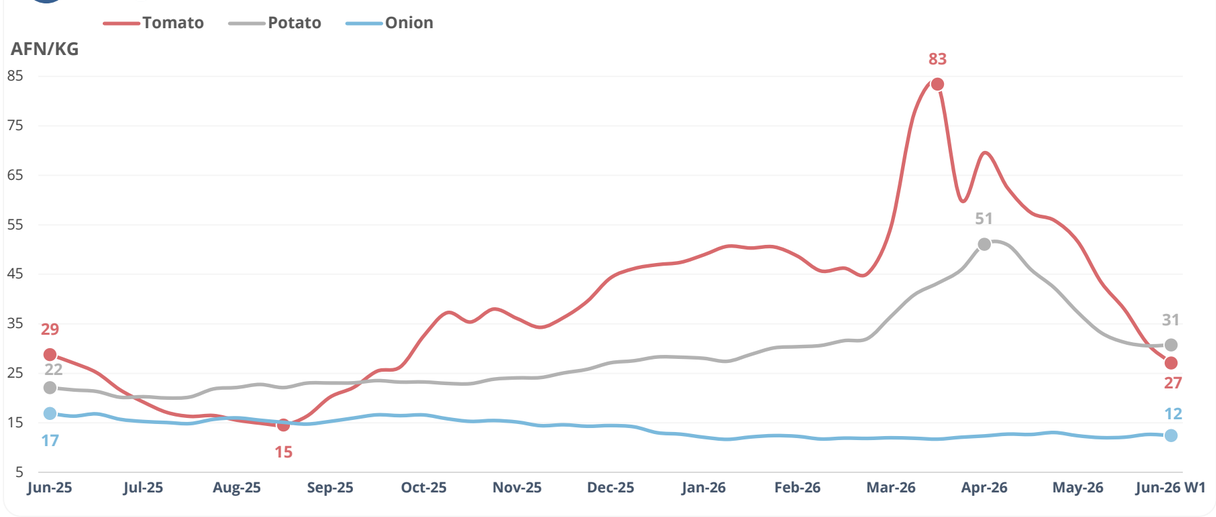

2 Agriculture Input Prices (AFN)

3 Staple Food Prices (AFN/KG)

4 Vegetable Prices (AFN/KG)

WEEKLY MARKET REPORT

Issue 298: Week 1 – June 2026

Notes

Data Collection: WFP collects price data weekly from all 34 provincial capitals through third-party monitors. Monthly prices represent the average of four weekly observations.

Wheat Flour Varieties: WFP monitors two main wheat flour types in Afghanistan:

- **Low-price wheat flour** is mostly sourced domestically, typically has a slightly darker colour.
- **High-price wheat flour** is mostly imported and appears more whiter in colour.

Rice Varieties: WFP monitors two rice varieties in Afghanistan: (There are no significant nutritional differences between these types).

- **Palawi**, a long-grain variety that is generally preferred and primarily imported.
- **Sholae**, a short-grain variety that is generally less preferred, lower priced, and more commonly sourced domestically.

Pulses: The price of pulses represents the average price of lentils, chickpeas, and red beans, based on the available varieties.

Labour Market: Casual labourers typically lack specific skills and are hired by the hour or day, or for specific tasks, receiving lower wages than skilled labourers.

Terms of Trade (ToT): Captures the purchasing power of the households and it is calculated using the price of wheat flour (low price).

- **Pastoralist ToT** captures the purchasing power of the households that own or have access to livestock. It measures the quantity (in kg) of wheat flour (low price) obtainable from the sale of one-year-old female sheep.
- **Labour ToT** captures the purchasing power of unskilled labourers. The real ToT measures the quantity of wheat flour obtainable from the average daily wage of an unskilled labourer, adjusted for the average number of working days per week. Whereas the nominal ToT for unskilled labour doesn't include the number of working days and instead calculates the average daily wage of casual labour relative to the average price of wheat flour.

Price Interpretation: In the price table, positive changes indicate a decline in prices, while negative changes indicate an increase in prices (from the consumer's perspective). For ToT and labour indicators, positive change represent improvement and negative change represent deterioration.

Colour Coding: The colours used in the price table represent below:

- **Grey:** Negligible changes (≤±2% weekly; ≤±5% monthly/yearly)
- **Dark Blue:** Significant positive changes (≥±5% weekly; ≥±10% monthly/yearly)
- **Light Blue:** Moderate positive changes (≥±2% weekly; ≥±5% monthly/yearly)
- **Light Red:** Moderate negative changes (≥±2% weekly; ≥±5% monthly/yearly)
- **Dark Red:** Significant negative changes (≥±5% weekly; ≥±10% monthly/yearly)
