BANGLADESH MARKET MONITOR
APRIL 2026

Iran War: Impact on Bangladesh

Fuel price increased by **15-20%**

LPG price increased by **45%**

Bus fares increased by **BDT 0.11** per km

Soybean oil price increased by **BDT 4** per litre

Proposed rise in electricity tariff by **BDT 1.2** per unit

Fertilizer production **shut down** due to lack of feedstock

Key Messages

Inflation: General inflation increased in April hitting **9.04 percent**, up from 8.71 percent in March 2026, driven by rising costs of both food and non-food items owing to fuel related shocks arising from the Iran war. Food inflation reached **8.39 percent,** up from 8.24 percent in the previous month. Non-food inflation also increased significantly to **9.57 percent** in April 2026 from 9.09 percent in March, driven mainly by increased fuel and transport costs.[1] Experts opined that inflation rate in April does not fully capture the real picture due to delayed fuel price adjustments, effective from 19 April 2026. The real impact is likely to be reflected more clearly in the coming months. On a year-on-year basis, food inflation decreased slightly by 0.24 percentage points, and non-food inflation had a negligible decrease by 0.04 percentage points. The overall inflation has remained at a persistently high level that continues to outpace wage growth, disproportionately affecting people in lower-income groups. Both rural and urban food inflation showed similar upward trends in the reporting month, hitting 8.23 and 8.81 percent, respectively. Food prices hit urban consumers harder than those in villages.

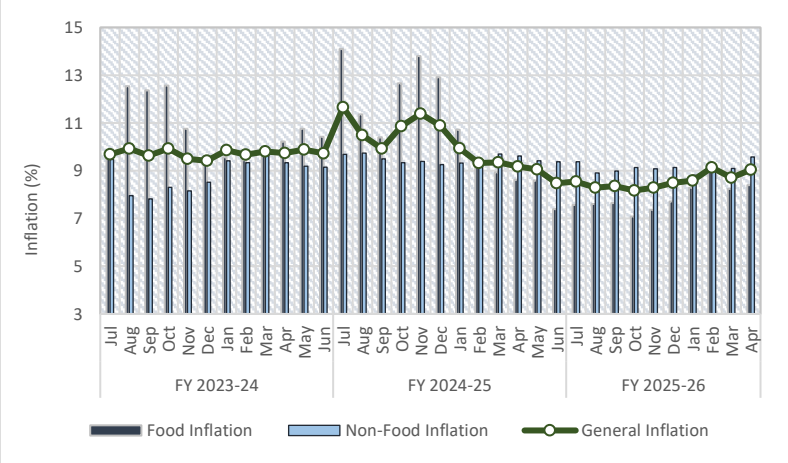

***Figure 1**: National Inflation trend (Point to Point)*

Bangladesh Economy: The country's gross foreign exchange reserves were fairly stable even after settling rising import bills through the Asian Clearing Union (ACU)[2] for March-April period. The reserves stood at USD 34.14 billion in gross terms and USD 29.5 billion as per IMF (BPM6) calculations. Officials referred the reserves as satisfactory, having a year-on-year growth of more than 24 percent, backed by higher remittance inflows and lower import-payment obligations in this period. This stable growth in reserves would cover around five months of import bills, which may help keep the country's foreign exchange market stable.

The official USD exchange rate rose by BDT 0.2 month-on-month, reaching **BDT 122.74.**[3] The Central Bank has started allowing a gradual depreciation of BDT against USD to manage pressure from rising global energy prices. The Central Bank has also started buying dollars through auctions in April after a break of almost two months to bring stability to the foreign exchange market. [4] Bangladesh's export earnings rebounded strongly in April, ending eight consecutive months of decline, as demand recovered in key markets including the US and the UK. Earnings rose by about 15 percent compared to the previous month, hitting USD 4 billion, higher by 33 percent year-on-year. [5] The country received **USD 3.13 billion** as remittance in April. The inflows were lower than March's record high inflow of USD 3.75 billion on the back of a seasonal spike ahead of Ramadan and Eid-ul-Fitr. Despite the monthly decline, remittance inflows were about 14 percent higher year-on-year.[6]

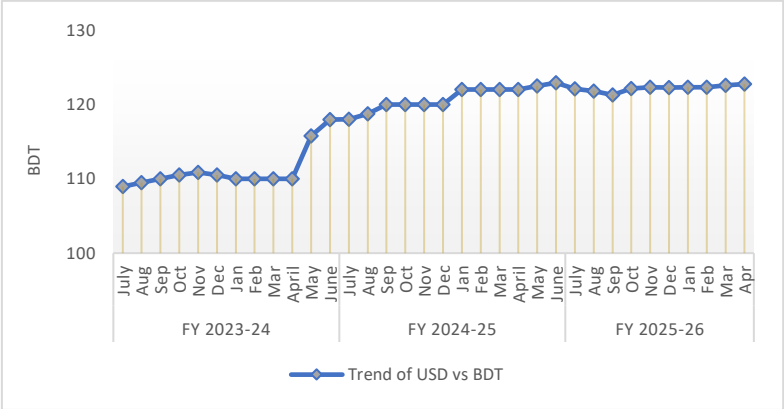

***Figure 2**: Exchange rate of USD/BDT*

Fuel: Bangladesh Energy Regulatory Commission (BERC) has increased the retail price of 12 kg liquefied petroleum gas (LPG) cylinders twice in April 2026. Initially, the price was revised to **BDT 1,728** effective from 02 April, increased by BDT 387 from the previous month's price. On 19 April 2026, the 12 kg LPG cylinders price was increased again by BDT 212, reaching **BDT 1,940**. The price of "autogas" (LPG used for motor vehicles) was also raised to **BDT 79.77** per litre, about 30 percent higher month-on-month. LPG price adjustments were driven by fluctuations in international prices owing to increased shipping and insurance costs caused by conflicts in the Middle East. Other factors such as regulations in major exporting countries like Saudi Arabia, foreign exchange rates and changes in value-added tax (VAT) also contribute significantly in the price adjustments. The LPG price in Cox's Bazar also increased by BDT 271, hitting **BDT 1,975** per 12-kg cylinder this month.

Domestic Market Price: In domestic retail markets, the average national prices of essential food commodities like edible oil, potatoes, eggs, fish, onion, sugar, fresh fruits and vegetables rose across major markets in April 2026. Traders attributed the price increases to rising transport costs due to fuel price hikes, along with higher internation prices, higher freight costs and supply disruptions caused by the Middle East crisis. While the retail prices of food items like basic staples (rice, wheat), green chili, garlic and poultry showed a moderate fall compared to the previous month.[7] However, average retail prices of rice have remained consistently high over the past few years, posing a major concern for food inflation. The government allocates significant subsidies on rice production in terms of fertilizers, seeds, and irrigation to maintain stability in production and price. Yet, rice prices have followed an upward trend due to factors such as increased production costs, market manipulation, lower-than-expected government procurement, and higher import costs. The average national market price of coarse rice was about 53 percent higher compared to the pre-COVID time in March 2020. The price trend in the retail markets of Cox's Bazar, however, showed the opposite trend compared to the national average prices for commodities like palm oil, red lentils, onions, fresh fruits and vegetables (price details provided in Annex I and II).

Imports and Stock: During the ongoing FY 2025-26 up to April, about 1.16 million mt of rice was imported, one-third was imported by the private sectors. The government reduced rice import duties to encourage imports by the private sectors and authorized to import a total of 0.8 million mt of rice for the ongoing FY. The government has been boosting rice imports to stabilize domestic rice prices as well as to strengthen buffer stocks, mitigate market volatility, and maintain national food security amid global uncertainties. On the other hand, 7.02 million mt of wheat was imported during this period, close to double compared to the previous year. Imports meet over 85 percent of the country's wheat requirement. Demand for wheat-based foods has been growing with the changing consumption behaviour. Total food grain imports by both the public and private sectors reached **8.18 million** mt marking a 36 percent year-on-year increase over this period.

For the ongoing FY 2025–26, the Department of Agricultural Extension (DAE) under the Ministry of Agriculture has set a provisional food grain production target of 45.39 million MT.[8] The public food grain stock as of April 2026 was about 1.7 million mt, of which rice and wheat stocks were 1.3 and 0.4 million mt, respectively. Public stock remains a crucial tool for stabilizing food prices, safeguarding food security during emergencies and supporting various government food-based social protection

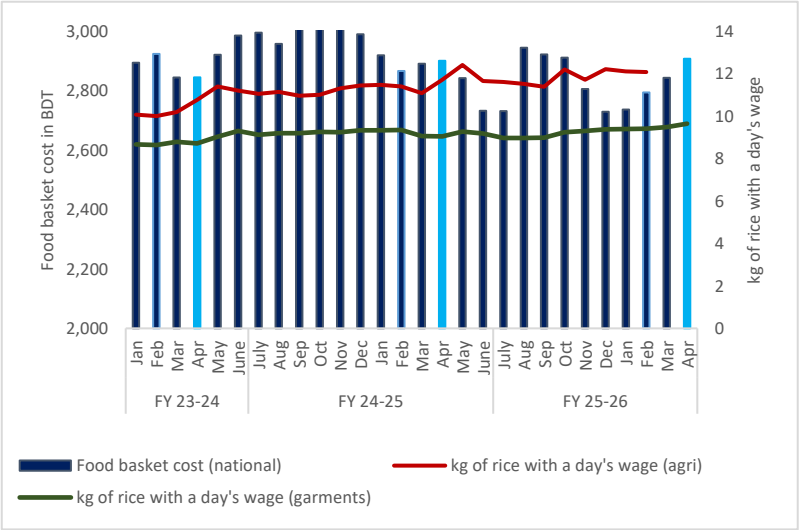

[3] Weighted Average Rate (WAR) from the Bangladesh Bank, https://www.bb.org.bd/en/index.php/econdata/exchangerate

[7] Market price data is obtained from the DAM, and inflation data is produced by the BBS using different data sources. The correlation between these two trends could be more logically explained if the same price data source would have been used for calculating inflation rates.
[8] *FPMU, Ministry of Food*

and disaster-responsive programmes. Despite higher import volume and sufficient reserves, retail prices of coarse rice have remained consistently high.

Cost of the Food Basket: The national monthly cost of a food basket[9] increased further by BDT 64 in April 2026 compared to the previous month, hitting BDT 2,907 per person per month (Figure 3). The prices of some essential food commodities like edible oil, potatoes, animal protein sources (eggs, fish), sugar and all types of fruits and vegetables had increased in domestic markets. In contrast, the national food poverty line (HIES 2022) stands at BDT 1,851 which is the minimum per capita expenditure that a person needs to be able to afford the cost of basic consumption needs[10]. The cost of the basket exceeds the national poverty line, indicating that the poor households do not have access to an income sufficient to afford a healthy diet. In February 2026 (data up to April 2026 is not available), the daily wage for typical agricultural labour was equivalent to purchasing about 12 kg of coarse rice based on a day's average wage of BDT 625.[11] The situation is even worse for garment sector workers whose daily earnings were sufficient to afford only 9.6 kg of coarse rice[12]. The food price trend remained consistently high, continuing to place a severe burden on the poor households, leaving them with less purchasing power and a higher risk of food insecurity, making it difficult to meet their essential needs.

Figure 3: *Cost of food basket per person per month (National)*

Food Basket Composition:	
Food items	**Minimum requirement Per person per month (kg)**
Coarse Rice	7.8
Wheat	0.9
Potato	0.9
Pulses and Legumes	1.5
Leafy vegetables	4.5
Vegetables	9
Fruits	30 (pcs)
Fish/ meat/ poultry	3
Egg	30 (pcs)
Milk	4.5
Sugar	0.75
Cooking Oil	0.81
Spices	0.6

In April 2026, the negotiated cost of an energy-sufficient food basket[13] used for WFP's e-voucher outlets in Cox's Bazar was BDT 1,395, which is still 4 percent lower than WFP's e-voucher value that allows flexibility to absorb USD rate fluctuations. The overall cost of the negotiated food basket decreased slightly by BDT 7 month-on-month, driven by a significant reduction in poultry and onion prices in local markets. The negotiated price of the basket was about BDT 68 lower compared to the actual prices in the local markets in Ukhiya and Teknaf (BDT 1,463). The recent fuel price increase effective from 19 April has not yet reflected in the retail market prices as increased transport costs might not immediately be reflected in retail prices due to short-term fixed-price delivery agreements with transport operators. High volume of local production might also have contributed to market price stability.

The negotiated basket cost in Bhasan Char (BC) was BDT 1,488[14], up by BDT 18 compared to the previous month. Prices of red chili and potatoes rose significantly in the local markets (Figure 4). Compare to the local markets where the basket cost was BDT 1,565, the negotiated basket cost was lower by BDT 77. Overall, market prices in Bhasan Char remain higher than those in Cox's Bazar, largely due to the increased transaction costs associated with transporting goods from Chittagong, the primary supply hub.

[9] *Adopted from the Food Composition Table for Bangladesh 2013, Institute of Nutrition and Food Science, University of Dhaka, with technical support from the National Food Policy Capacity Strengthening Programme. The national food basket represents the minimum required quantity of a nutritious diet for an adult person per day, offering 2,100 kcal with the recommended percentage of protein and fat. The food basket cost was calculated per person per month at the national level. Market prices of the food items have been collected from the DAM. The basket comprises of rice (coarse), wheat, lentils, potatoes, seasonal fruits and vegetables, fish, poultry, egg, milk, sugar, soybean oil, onion, garlic, and green chili.*

[10] *The food poverty line is estimated using the Cost of Basic Needs (CBN) method where the cost of a besic food basket, comprising elevent essential food items offering daily nutritional requirement of 2122 Kcal per person, is calculated (HIES 2022).*

[11] *The rate of wage labourers varies between BDT 550-700 according to the Monthly Agriculture Labor Wage Survey, Bangladesh Bureau of Statistics (BBS) data, on an average of BDT 625 per day for the agricultural wage labourers*

[12] *As of December 2023, the minimum monthly wage for garment workers in Bangladesh is BDT 12,500. Based on a 26-day working month, this amounts to a nominal daily wage of approximately BDT 480.*

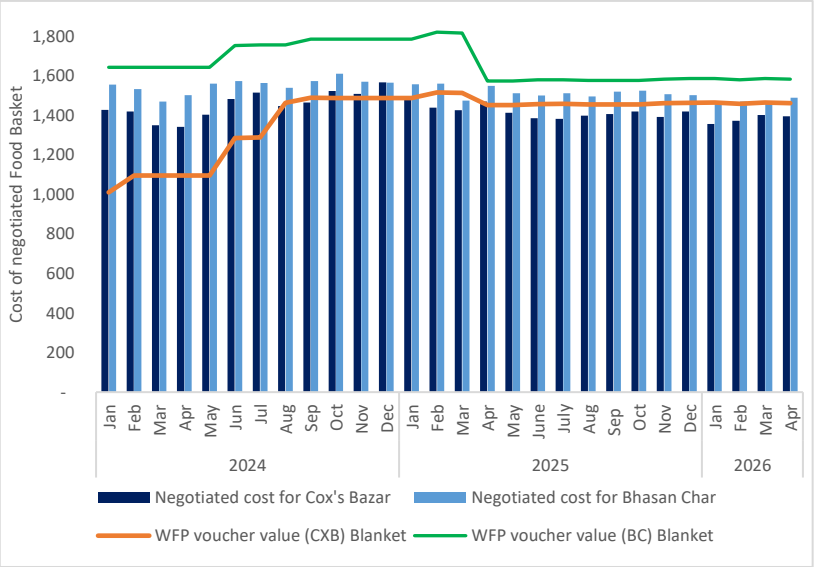

[13] *The energy sufficient food basket comprises of rice(fortified), lentils, oil-soybean, potatoes, onion, sugar, salt, egg, turmeric, garlic, chili, fish, chicken, chickpeas, wheat flour.*

[14] *Negotiated price based on the cost of the basket in Chattogram market for BC e-voucher outlet.*

Following a review of the food basket composition, prevailing market trends, and other associated factors, transfer values for general food assistance were adjusted in April 2025. In Cox's Bazar, the transfer value was revised from USD12.5 to USD12, while in Bhasan Char, it was adjusted from USD15 to USD13.

Figure 4: *Comparison of costs of energy-sufficient food baskets (per person per month) in Cox's Bazar and Bhasan Char for different modalities*

Food Basket Composition:	
Food items	**Minimum requirement Per person per month (kg)**
Rice- fortified	12.3
Lentil red	1
Oil-Soybean	1.1
Potato	0.8
Onion	0.2
Sugar-Refined	0.1
Salt- Iodized	0.1
Egg	15 (pcs)
Chili-Dry red chilli	0.2
Fish dried	0.3
Chicken	0.5
Chickpeas	0.2
Wheat flour	0.8

To address the increasingly protracted Rohingya crisis amid the ongoing resource constraints, WFP has further tailored assistance from blanket rations to needs-based support for nearly 1.2 million refugees living in Cox's Bazar and Bhasan Char. The tailoring was done using a household food security based Targeting and Prioritization Exercise (TPE) where the Rohingya population has been classified into three categories: *Extremely Food Insecure*, *Highly Food Insecure*, and *Food Insecure*. Differentiated ration values, aligned with households' food security levels and estimated food gaps and in line with global best practice for protracted crises, have been implemented from April 2026 ensuring inclusiveness.

Description of differentiated ration values:

Category 1 – Extremely food insecure: USD 12 per person per month in Cox's Bazar and USD 13 in Bhasan Char.
Category 2 – Highly food insecure: USD 10 per person per month in Cox's Bazar and USD 11 in Bhasan Char.
Category 3 – Food insecure: USD 7 per person per month in Cox's Bazar and USD 8 in Bhasan Char.

The slightly higher transfer values in Bhasan Char reflect the higher cost of commodities on the island, driven by increased logistics costs, while representing an equivalent quantity of food assistance.
